Plan of Action as Junior Chapter Representative

As a junior chapter representative, I would like to make it easy for SHPE members to complete their community service hours, as well as, help the students from the junior chapter to figure out what field of engineering they would like to study. I plan to do this by having at least one event a month. That gives SHPE members plenty of opportunities to get their community service hours completed. As for helping the students from the Junior Chapter I would like to have each event focus on a different field of engineering. When I was in high school, I was struggling to figure out what field of engineering I wanted to go into. It wasn't until I had done many projects in my engineering class that had helped me decide what I wanted to major in. By having different events, I can give these students some insight as to what each field does. For example, one event can be centered around Arduinos to interest students into computer science or computer engineering. Another event can be centered around building the strongest bridge to get students into civil engineering. I could also ask other SHPE members from different fields what projects relating to their fields would interest students. Overall, as the Junior Chapter Representative I would like to make it easy for current SHPE members to complete their community service hours. I also plan to help students find out what engineering field they are passionate about by having a variety of events be focused on different fields.
